**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-21, drawn to an electrochemical cell component, classified in class 204, subclass 279.
  - II. Claims 22-48, drawn to a bipolar plate assembly, classified in class 204, subclass 279.
  - III. Claims 49-67, drawn to an electrochemical cell, classified in class 204, subclass 252.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II, I and III and II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, each subcombination has separate utility such as for use in a fuel cell, and not an electrolytic cell, and without the specific features of the other subcombinations. In particular, only group I includes the feature of a groove having a nonuniform cross-section; only group II includes the feature of a gas barrier; and, only group III includes the feature of a membrane in association with a frame. See MPEP § 806.05(d).
3. It is noted that claims 22-39 and claims 40-48 are related as combination and subcombination. See MPEP 806.05(c). However, the specifics of the subcombination

(claim 22) are required for the combination (claim 40), and, thus, no restriction is proper between these claims.

4. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
